## Adalogical Ænigmas No. 63

Gentle solver,

It must surely be evident, to even the most *casual* observer, that we live in a time of deep social and political divisions. I fear, however, that we rarely make the effort truly to examine and understand these *gaps* in our society, be they betwixt economic strata, or geographic regions, or even genders!

It is my fervent hope that the present ænigma may provide some useful *practise* in measuring out such gaps.

In the grids below, I desire you should blacken *exactly* two squares in each row and column, taking care never to allow *any* two black squares to touch, not even diagonally. Wherever you may find a numeric label, it specifies the precise quantity of *unblackened* squares that must lie between the two blackened squares in the corresponding row or column. Finally, I ask that you never blacken squares in the *same* position within *both* grids.

Once you have completed your grids, you may move on to finding the final answer to my ænigma. Circle every letter in each grid that occupies the same position as a *blackened* square in the other grid. Reading those letters in left-to-right, top-to-bottom order, *across* the two grids, will reveal a clue to your final answer.

Good luck!
