

# The Ænigmatic Addenda:

## Guest Constructors revisit the Adalogical Ænigmas

No. 1: Mr David Millar revisits Ænigma #17

Gentle solver,

There can be no finer choice to inaugurate the *Ænigmatic Addenda* than my dear friend Mr David Millar, a prodigiously talented and *prolific* logician and cartographer, much of whose work you can see at [www.thegriddle.net](http://www.thegriddle.net).

Mr Millar is an inveterate traveler, and the multitude of *digits* in my Ænigma #17 immediately caught his attention, reminding him as they did of the numbers assigned to the various byways he had followed on his many wanderings.

Please enter a single digit, betwixt 1 and 7, in each and every square in the diagram below. (In the example, we use only the digits from 1 to 5.) Each boldly outlined, 7-by-7 square in the diagram should receive exactly one of *each* digit in every row and every column. Note that some small squares participate in *two* such larger regions and must obey the constraints for *both*.

Where there exists a less-than symbol between two squares, pray ensure that your entered digits obey the given inequality. Where a circled number has been placed, your digits must differ by *precisely* that amount.

Once your diagram is complete, you may move on to finding the final answer to this ænigma. In each column of the diagram, please sum the numbers you entered in the *shaded* squares. Translating each sum into a letter (with 1 = A, 2 = B, and so on), and reading those letters in left-to-right order will reveal a clue to your final answer.

Good luck!

*Ada*
