

The Ænigmatic Addenda:

Guest Constructors revisit the Adalogical Ænigmas

No. 11: Mr John Bulten revisits Ænigma #8

Gentle solver,

This our eleventh *Addendum* was provided to us by Mr John Bulten, former puzzle editor for the news network WND, a recognized “expert” on Bible codes, and one of the veritable *panophy* of talents whose works of logical perplexity are regularly on display at Grandmaster Puzzles, www.gmpuzzles.com/blog.

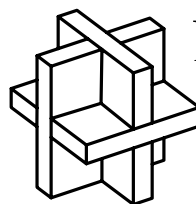

In the grid below, some of the squares that do *not* contain arrows should be completely blackened; however, no two black squares may ever be *adjacent*, either horizontally or vertically. Each arrow’s accompanying number counts the black squares occupying the same row or column in the indicated direction. Please note that there may be *additional* black squares, not targeted by any arrow.

Your primary task, however, is to draw a single, continuous loop that passes exactly once through every *remaining* square, neither blackened nor arrow-laden. That loop mayn’t touch or cross itself, and may only make right-angled turns.

Once you’ve completed the loop, you can move on to finding the final answer to this ænigma. Beginning at the lower-left corner of the loop, traverse it *clockwise*, noting the letter in each square where the loop makes a *right-hand* turn. Reading those letters in order around the loop will yield a clue to your final answer. In this ænigma, that clue comes from a longer work; be so good as to identify the *book* from which it has been extracted.

Good luck!

Atta
