Gentle solver,

We owe this our twenty-seventh *Addendum* to a rather younger than usual contributor whom we shall therefore address by his pseudonym of “jkittykitkat.” He is a Korean American international-school student currently in his junior year, but already a clearly *talented* constructor, as is evidenced not only by his work here but also by the contents of jkpuzzles.wordpress.com.

As was I in my original ænigma, jkittykitkat is inspired by long, rambling walks, a pastime I find especially crucial amongst the ever so *constrained* days we presently must occupy.

The grid below represents a *meadow* over which one might enjoy a peregrination, walking hither and yon. We wish you there to trace out a single looping path that passes through every grid square either *once* or *twice*. In any square your path visits twice, it mayn't *turn*, but must instead *cross* itself in the manner of a “plus” symbol. We have helpfully provided you with the shape of the path in several squares; pray do not *alter* any such givens.

Once you have completed your cartography, you may move on to finding the final answer to this ænigma. Please now *walk* your path, beginning in the lower-left corner and proceeding upwards. Read that square's letter and also any letter in a square where your path turns to the *right*. Those letters will reveal a clue to your final answer.

Good luck!

Ada
